

## UVA and UVB Light Sensor with I<sup>2</sup>C Interface

### DESCRIPTION

The VEML6075 senses UVA and UVB light and incorporates photodiode, amplifiers, and analog / digital circuits into a single chip using a CMOS process. When the UV sensor is applied, it is able to detect UVA and UVB intensity to provide a measure of the signal strength as well as allowing for UVI measurement.

The VEML6075 provides excellent temperature compensation capability for keeping the output stable under changing temperature. VEML6075's functionality is easily operated via the simple command format of I<sup>2</sup>C (SMBus compatible) interface protocol. VEML6075's operating voltage ranges from 1.7 V to 3.6 V. VEML6075 is packaged in a lead (Pb)-free 4 pin OPLGA package which offers the best market-proven reliability.

### FEATURES

- Package type: surface-mount
- Dimensions (L x W x H in mm): 2.0 x 1.25 x 1.0
- Integrated modules: ultraviolet sensor (UV), and signal conditioning IC
- Converts solar UV light intensity to digital data
- Excellent UVA and UVB sensitivity
- Reliable performance of UV radiation measurement under long time solar UV exposure
- 16-bit resolution per channel
- UVA and UVB individual channel solution
- Low power consumption I<sup>2</sup>C protocol (SMBus compatible) interface
- Package: OPLGA
- Temperature compensation: -40 °C to +85 °C
- Output type: I<sup>2</sup>C bus
- Operation voltage: 1.7 V to 3.6 V
- Material categorization: for definitions of compliance please see [www.vishay.com/doc?99912](http://www.vishay.com/doc?99912)

### APPLICATIONS

- Handheld device
- Notebook
- Consumer device
- Industrial and medical application

**APPLICATION INFORMATION****Pin Connection with the Host**

The configuration and data registers of the VEML6075 are accessed via the I<sup>2</sup>C interface. The hardware schematic is shown below in fig. 6.

The 0.1  $\mu\text{F}$  capacitor near the  $V_{DD}$  pin is used for power supply noise rejection. The 2.2 k $\Omega$  is suitable for the pull high resistor of I<sup>2</sup>C.

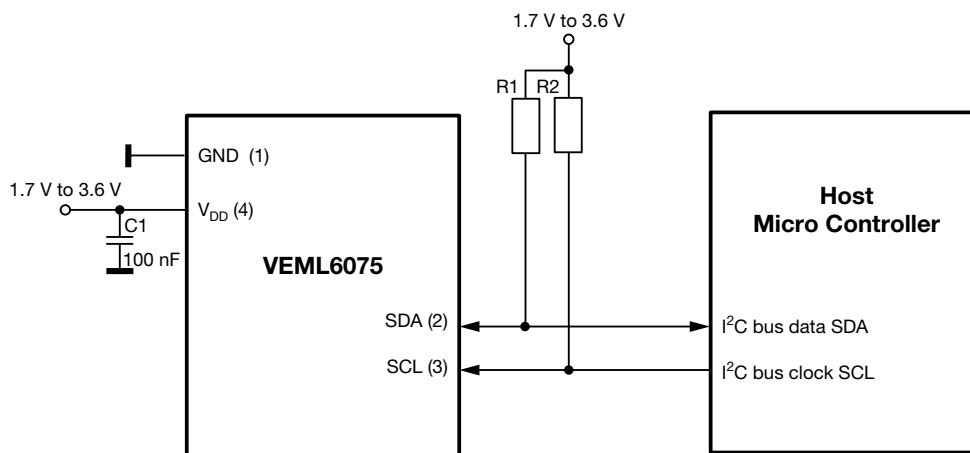

Fig. 6 - Hardware Pin Connection Diagram

## Digital Interface

The VEML6075 contains a CONF register (00h) used for operation control and parameter setup. Measurement results are stored in four separate registers, one each for UVA, UVB, UV<sub>comp1</sub>, and UV<sub>comp2</sub> (07h to 0Bh respectively). All registers are accessible via I<sup>2</sup>C communication. Fig. 7 shows the basic I<sup>2</sup>C communication with the VEML6075. Each of the registers in the VEML6075 are 16 bit wide, so 16 bit should be written when a write command is sent, and 16 bit should be read when a read command is sent.

The built in I<sup>2</sup>C interface is compatible with I<sup>2</sup>C modes “standard” and “fast”: 100 kHz to 400 kHz

Send Word → Write Command to VEML6075

Receive Word → Read Data from VEML6075

S = start condition

P = stop condition

A = acknowledge

Shaded area = VEML6075 acknowledge

Fig. 7 - Command Protocol Format

## Note

- Please note the repeat start condition when data is read from the sensor. A stop condition should not be sent here.

## Slave Address and Function Description

VEML6075 uses 0x10 slave address for 7-bit I<sup>2</sup>C addressing protocol. VEML6075 has 16-bit resolution for each channel (UVA, UVB, UV<sub>comp1</sub>, and UV<sub>comp2</sub>).

### Data Access

VEML6075 has 16-bit high resolution sensitivity for each UV channel. One byte is the LSB and the other byte is the MSB. The host needs to follow the read word protocol as shown in fig. 7. The data format shows as below.

TABLE 6 - 16-BIT DATA FORMAT

N = no acknowledge

☐ Host action

☒ VEML6075 response

- Data byte low represents LSB and data byte high represents MSB.

### Data Auto-Memorization

VEML6075 keeps the last results read. These values will remain in the registers, and can be read from these registers, until the device wakes up and a new measurement is made.

### UV-Index Calculation

In order to use the result data to calculate the UV-Index, please refer to the “Designing the VEML6075 into an Application” application note ([www.vishay.com/doc?84339](http://www.vishay.com/doc?84339)).

**RECOMMENDED IRON TIP SOLDERING CONDITION AND WARNING HANDLING**

- Solder the device with the following conditions:
  - Soldering temperature: 400 °C (max.)
  - Soldering time: 3 s (max.)
- If the temperature of the method portion rises in addition to the residual stress between the leads, the possibility that an open or short circuit occurs due to the deformation or destruction of the resin increases.
- The following methods: VPS and wave soldering, have not been suggested for the component assembly.
- Cleaning method conditions:
  - Solvent: methyl alcohol, ethyl alcohol, isopropyl alcohol
  - Solvent temperature < 45 °C (max.)

4.3. Time: 3 min (min.)
