

# Cyberon DSpotter SDK (Arduino IDE Edition)

## Programming Guide

Ver no: 2.2.12

Release no: 2021090901

Date of issue: Sep 09, 2021

Leading Speech Solution provider

### 1. About Cyberon DSpotter SDK

**DSpotter SDK** is Cyberon's flagship high-performance embedded voice recognition solution specially optimized for mobile phones, automotives, smart home devices, consumer products, and interactive toys. Based on phoneme acoustic models, it enables developers to create applications of speaker-independent (SI) voice recognition capability without requiring costly data collection process for specific commands. With Win32-based DSpotter Model Tool, developers can easily and quickly create their own voice command models simply by text input. Other important features include always-on keyword-spotting capability, highly noise immune, adjustable sensitivity, voice quality assessment, and more than 30 commonly used language versions available.

## 2. Release History

Date	Version No.	Release No.	Author	Description
2021/09/09	2.2.12	2021090901	Tom	<b>Purpose:</b> First release.

### 3. Related Files

#### 3.1. Related Files

##### Library

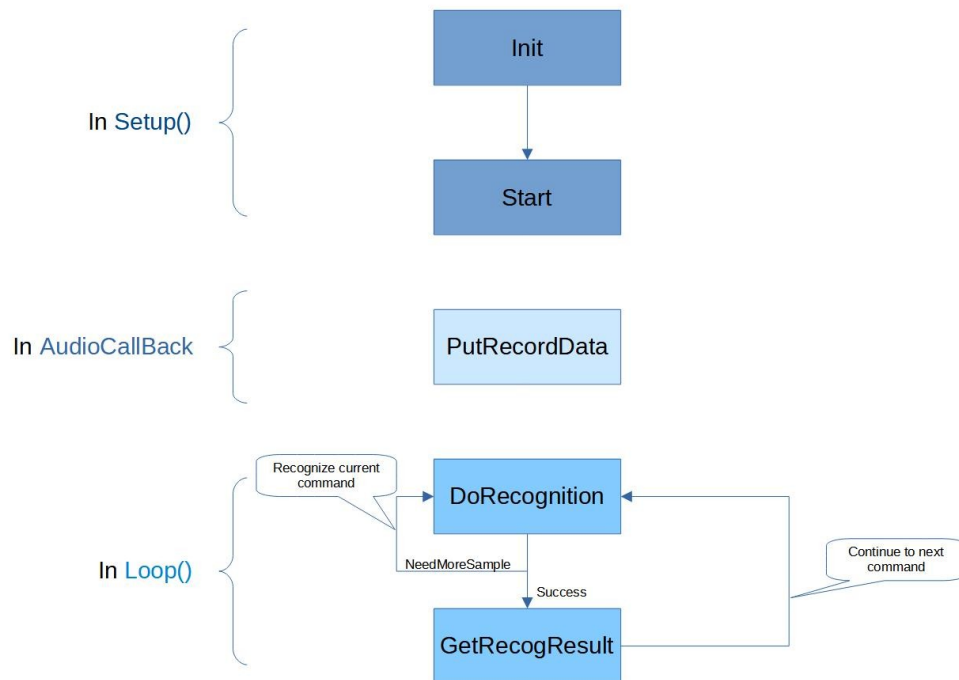

- **libDSpotterSDK.a**, the library for DSpotter SDK arduino edition.
- **CDSpotter.h**, the cpp api header for DSpotter SDK arduino edition.

##### Data

- **HeyRAKStar\_OpenCamera\_pack\_withTxt\_Enc\_L0.h**: the header file that contains a level 0 model array which packs both trigger group and command group models together. To use the model array, developers only need to assign it to Init function. Note that this header file is in UTF8 format. The type of the model array is uint32\_t and in little-endian manner.
- **HeyRAKStar\_OpenCamera\_pack\_withTxt\_Enc\_L1.h**: the header file that contains a level 1 model array which packs both trigger group and command group models together. In comparison with the level 0 model under the same parameter settings, the level 1 model provides better recognition stability but also requires more computing and storage requirements.

## **4. DSpotter SDK API Standard Version**

### **4.1. Calling Flow Chart of Standard API**

## 4.2. APIs

### *GetMemoryUsage*

#### Purpose

Get the memory usage of DSpotter.

#### Prototype

```
int CDSpotter::GetMemoryUsage(const uint32_t * lpdwModel, int
nRecordCacheTimeMS)
```

#### Parameters

`lpdwModel(in)`: The voice model.

`nRecordCacheTimeMS(in)`: The cache length of record data, unit is millisecond. It must be greater than or equal to 60.

#### Return value

Return the memory usage.

### *GetVerInfor*

#### Purpose

Get the version information of DSpotter.

#### Prototype

```
const char* CDSpotter::GetVerInfor()
```

**Parameters**

none.

**Return value**

Return the version string.

***GetSerialNumber*****Purpose**

Get the serial number of Arduino device.

**Prototype**

```
const char* CDSpotter::GetSerialNumber()
```

**Parameters**

none.

**Return value**

Return the serial number string.

## ***Init***

### **Purpose**

Initialize DSpotter.

### **Prototype**

```
int Instance.Init(const uint32_t *lpdwLicense, int nLicenseSize, const uint32_t  
*lpdwModel, int nRecordCacheTimeMS, unsigned char *lpbyMemPool, int  
nMemSize)
```

### **Parameters**

lpdwLicense(in): The license data.

nLicenseSize(in): The size of the license data.

lpdwModel(in): The voice model.

nRecordCacheTimeMS(in): The cache length of record data, unit is millisecond.

It must be greater than or equal to 60.

lpbyMemPool(in): The memory buffer that will be used by Dspotter engine.

nMemSize(in): The size of the memory buffer.

### **Return value**

Return success or error code.

## ***Start***

### **Purpose**

Start the process of recognition. Please call Start() before starting the recording device.

### **Prototype**

```
int Instance.Start()
```

### **Parameters**

none.

### **Return value**

Return success or error code.

## *Stop*

### **Purpose**

Stop the process of recognition. PutRecordData() and DoRecognition() will do nothing after calling Stop().

### **Prototype**

**int Instance.Stop()**

### **Parameters**

none.

### **Return value**

Return success or error code.

## *Release*

### **Purpose**

To release DSpotter, then the memory buffer(lpbyMemPool) can be reused by others.

### **Prototype**

**int Instance.Release()**

### **Parameters**

none.

### **Return value**

Return success or error code.

## *SetAGC*

### **Purpose**

Set the option of auto gain control(AGC).

### **Prototype**

**int Instance.SetAGC(bool bEnableAGC = false, int nScalePercentage = 100)**

### **Parameters**

bEnableAGC(in): To enable or disable AGC. The default value is false.

nScalePercentage(in): The scale percentage of gain is 100 ~ 1600. The default value is 100.

### **Return value**

Return success or error code.

## ***SetCommandStageProperty***

### **Purpose**

Set the flow property at command stage.

### **Prototype**

```
int Instance.SetCommandStageProperty(int nTimeout = 6000,  
bool bCommandStageRepeatUntilTimeout = false)
```

### **Parameters**

nTimeout(in): The maximum recording time in ms when there is no result at command stage. The valid range is 1000 to 30000. The default value is 6000.

bCommandStageRepeatUntilTimeout(in): If false, the recognition flow will switch to trigger stage immediately after recognizing the command. If true, it will recognize repeatedly at command stage until timeout. The default value is false.

### **Return value**

Return success or error code.

## ***PutRecordData***

### **Purpose**

Put the record data to the cached record buffer.

### **Prototype**

```
int Instance.PutRecordData(const short *lpsSample, int nNumSample)
```

### **Parameters**

lpsSample(in): The record data buffer.

nNumSample(in): The number of samples in the record data buffer.

### **Return value**

Return success or error code

## ***GetRecordLostCount***

### **Purpose**

Get the lost count when putting record data.

### **Prototype**

```
int Instance.GetRecordLostCount()
```

### **Parameters**

none.

### **Return value**

Return the lost count.

## ***DoRecognition***

### **Purpose**

Get 10 milliseconds of data from the cached record buffer and process it.

### **Prototype**

```
int Instance.DoRecognition(int *pnCurrentState)
```

### **Parameters**

pnCurrentState(out): The current stage.

### **Return value**

Return success if get the recognition result, error code otherwise.

## ***GetRecogResult***

### **Purpose**

Get the information of recognition result.

### **Prototype**

```
int Instance.GetRecogResult(int *pnID, char *lpszCommand, int nCmdLength,  
int *pnConfi, int *pnSGDiff, int *pnCmdEnergy)
```

### **Parameters**

pnID(out): The ID of command.

lpszCommand(out): The command buffer.

nCmdLength(in): The length of the command buffer.

pnConfi(out): The confidence score of command.

pnSGDiff(out): The human voice similarity of command.

pnCmdEnergy(out): The energy of command.

### **Return value**

Return success or error code.

### ***GetCommandCount***

#### **Purpose**

Get the count of recognition command at different stage.

#### **Prototype**

```
int Instance.GetCommandCount(int nStage)
```

#### **Parameters**

nStage(in): CDSpotter::TriggerStage or CDSpotter::CommandStage.

#### **Return value**

Return the command counts in the given stage.

### ***GetCommand***

#### **Purpose**

Get the information of command.

#### **Prototype**

```
int Instance.GetCommand(int nStage, int nIndex, char *lpszCommand,  
int nCmdLength, int *pnID)
```

#### **Parameters**

nStage(in): CDSpotter::TriggerStage or CDSpotter::CommandStage.

nIndex(in): From 0 to GetCommandCount(nStage) - 1.

lpszCommand(out): The command buffer.

nCmdLength(in): The length of command buffer.

pnID(out): The ID of command.

#### **Return value**

Return success or error code.

## 5. DSpotter SDK Error Code Table

Error Symbol	Error Code
<i>CDSpotter::InitStage</i>	-1
<i>CDSpotter::TriggerStage</i>	0
<i>CDSpotter::CommandStage</i>	1
<i>CDSpotter::Success</i>	0
<i>CDSpotter::NotInit</i>	-2001
<i>CDSpotter::IllegalParam</i>	-2002
<i>CDSpotter::LeaveNoMemory</i>	-2003
<i>CDSpotter::LoadModelFailed</i>	-2005
<i>CDSpotter::NeedMoreSample</i>	-2009
<i>CDSpotter::Stopped</i>	-2030
<i>CDSpotter::LicenseFailed</i>	-2200
